

Daily Sales v2.0 – Report Redesign Handoff

Oct 2, 2026 · @Josh Stevenson

Summary

Three new pages are built in the Daily Sales (v2.0) report and the 1-grid brand theme is applied, but the layout redesign is only part-done and **nothing is saved yet**. The report is mid-edit in the Power BI service (Fabric, BigQuery Reports workspace). Review it before clicking Save, or close it without saving to discard everything.

- **Asked for:** new pages from the "Duplicate of PRODUCT SALES | Overview" template; brand colours and fonts; reformatted KPI cards; custom tooltips; less visual noise; a redesigned template that keeps every filter field; and slicers that filter every visual.
- **Done:** three pages, brand theme, slicer audit, one fix so every slicer reaches the trend chart, and removal of a stray hidden chart.
- **Interrupted mid-step:** moving the slicers into a left-hand filter rail on SALES TRENDS. A few slicers are already resized but not yet moved, so that page's filter rows look broken until the step is finished or undone.
- **Not started:** tooltip pages, KPI card restyle, copying the new layout to the other pages.

Inputs: the brand booklet (1-grid brand booklet v2), the report design instructions (powerbi_report_design_instructions.md), the old Daily sales (beta) report, and two design-inspiration links (mokkup.ai, coupler.io).

Context

The report is the 1-grid daily sales report on WHMCS billing data. 1-grid is a South African web hosting provider; Nexora Web Agency (Josh) is building the report for it.

- **Report:** Daily Sales (v2.0), in the Fabric workspace "BigQuery Reports". It is edited in the Power BI service; no Desktop file is involved.
- **Semantic model:** Daily sales (Model) v2.0. Data comes from WHMCS (MySQL) through Dremio 21.2, via the on-premises gateway "BI Gateway Office" (server 1G-WPDN-POWERBI). Import mode, scheduled refresh. Header shows "Data updated 02/10/26".
- **Audience (from the design instructions):**
 - Executives: is revenue on track?
 - Sales and marketing: which products, customers and channels drive revenue?
 - Finance: what is unpaid, cancelled or pending?
 - BI team: do the numbers reconcile to WHMCS?

- **Data window:** order and invoice fields start about Jul 2025. A report-level filter limits Date (format) to 03/10/2025 – 02/10/2026, plus a Year filter. Every page also filters `Status_Group` (All) and `invoice_total > 0`; the second is listed twice.
- **Currency and VAT:** rand (R). Invoice-based measures include 15% VAT.

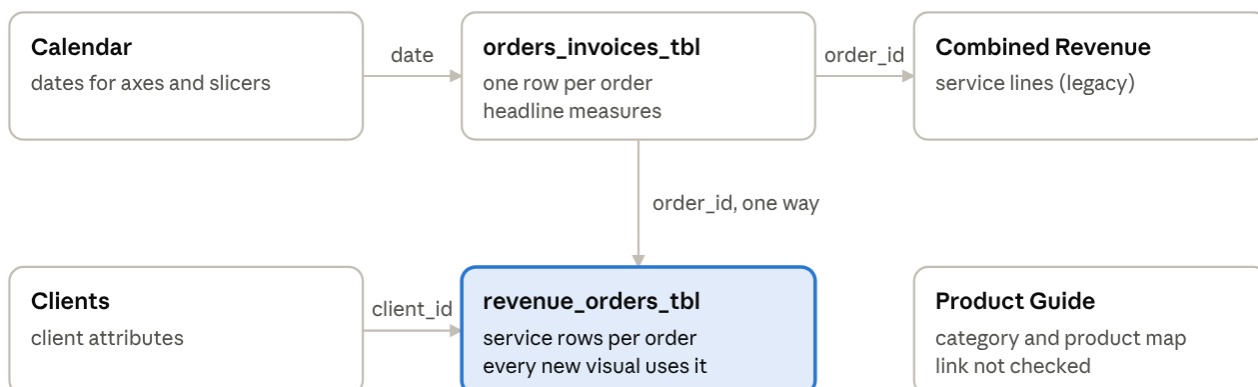

What was asked, in order:

1. Build new pages from the "Duplicate of PRODUCT SALES | Overview" template, focused on data value, insights and design principles, and informed by how the data is already used. Josh chose Sales Trends, Customer Insights and Product Mix, and asked to leave the report unsaved for review.
2. Follow the uploaded report design instructions.
3. Bring in anything of value from the old Daily sales (beta) report.
4. Reformat the pages:
 - use the brand palette and reformat the cards;
 - apply dashboard design best practice, add custom tooltips and cut visual noise;
 - redesign the template if useful, but keep every filter field.
5. Make sure filters work on every visual.
6. Use the two design-inspiration links.

Data model

The new pages rely on one rule: filters flow into `revenue_orders_tbl` from every side and never back out. So every visual on the new pages uses its measures.

Filters reach revenue_orders_tbl from every side; nothing flows back

Arrows show the direction filters flow. Calendar's exact path into the fact tables was not verified; date slicers do filter every new visual. A slicer on `revenue_orders_tbl` cannot change `orders_invoices_tbl`.

data model · 6 tables, filter direction

Table	One row per	Used for	Key measures (existing)
orders_invoices_tbl	Order (with its invoice fields)	Headline totals and trends, per the design instructions	Paid Invoice Revenue (the instructions call it "Paid Invoice Total"), Paid Orders
revenue_orders_tbl (calculated)	Service on an order, plus one row per order missing from Combined Revenue ("Not in Combined Revenue")	Product, category, customer and location splits; all new visuals	Paid Revenue (Products), Paid Orders (Products), Unpaid Revenue (Products), Unpaid Orders (Products), Unpaid / Cancelled Invoice Total, RO Invoice Total, Paid Invoice Total
Combined Revenue	Service line (legacy fact, 2021 on)	Source for revenue_orders_tbl; legacy pages	Rev, Count large order
Calendar	Date	Date slicers and time axes	—
Clients	Client	Client attributes, also copied into revenue_orders_tbl	Client count by Group, Client ID count
Product Guide	Product	Category › Sub Category › Product mapping (Guide page)	—
Level Of Detail	Parameter	Field parameter for level of detail	—

Rules from the design instructions that still apply:

- Never sum `invoice_total` on `revenue_orders_tbl`; it repeats on every service row.
- `total_rev` is list price excl. VAT, not invoice revenue.

- Order counts by product double-count by design, so never stack them into a total.
- Paid orders exclude R0 invoices.

Report inventory

The report has 13 pages. Pages 11–13 are new. The brand theme recoloured every page; no other existing page was edited.

#	Page	Visible	What it is	Changed this session
1	PRODUCT SALES Overview	Yes	Original product page: 17 slicers, 4 KPI cards, Category › Product matrix (Revenue R, Revenue %, Orders #, Orders %)	Theme only
2	Daily Overview	Yes	Daily sales: 8 slicers, KPI cards, two chart areas that were blank when viewed, category table	Theme only
3	Guide	Yes	Category / Sub Category / "What it includes" table from Product Guide	Theme only
4	Revenue Tooltip	Hidden	Existing tooltip page; not inspected	Theme only
5	Template	Hidden	Layout template	Theme only
6	Troubleshooting	Hidden	Not inspected	Theme only
7	Template	Yes	Second template; not inspected	Theme only
8	Duplicate of Template	Yes	Not inspected	Theme only
9	Page 1	Yes	Not inspected	Theme only
10	Duplicate of PRODUCT SALES Overview	Yes	The template used for the new pages (copy of page 1)	Theme only

#	Page	Visible	What it is	Changed this session
11	SALES TRENDS Overview	Yes	New: revenue trend, category mix, invoice status	New page; partial redesign (see Redesign in progress)
12	CUSTOMER INSIGHTS Overview	Yes	New: new vs existing, tenure, province, channel, sign-up	New page
13	PRODUCT MIX Overview	Yes	New: treemap, top 10 products, billing cycle, add-ons	New page

Pages 7–9 look like work-in-progress copies. Consider hiding or deleting them before the report is shared.

Template anatomy (original layout)

The template is a 1500 × 900 px page (Custom size, top-aligned) built from four groups and loose shapes. The positions below are the originals, so the redesign can be reversed or repeated. Values are px: height · width · x · y.

Group (Selection pane)	Item	Original h · w · x · y	Notes
Header Bar	Header (shape)	100 · 1500 · 0 · 0	White band
Header Bar	Title (text box)	80 · 1008 · 8 · 10	"PRODUCT SALES Overview", cyan; on the new pages the first words were changed
Header Bar	Logo (image)	80 · 184 · 1312 · 10	1-grid colour logo
Filters (row 1)	Date range slicer, between	90 · 180 · 5 · 105	Calendar Date (format)
Filters (row 1)	Relative date slicer	90 · 260 · 185 · 105	Last N Days; set to 1 on the template, 90 on the new pages

Group (Selection pane)	Item	Original h · w · x · y	Notes
Filters (row 1)	Product Category, Sub-category, Product, Invoice ID, Order ID, Client ID, Payment Method	90 · 150 · x 445, 595, 745, 895, 1045, 1195, 1345 · 105	Dropdown slicers
Filters (row 1)	Filter (shape)	100 · 1500 · 0 · 100	Row background with cyan outline
Filters (row 2)	Billing Cycle	90 · 175 · 5 · 205	Dropdown
Filters (row 2)	Country, Province, Domain, Discovery Method, Service Status, Customer Age, IP Address, Company	90 · 164 · x 180, 344, 508, 673, 837, 1001, 1166, 1330 · 205	Dropdowns
Filters (row 2)	KPI (shape)	100 · 1500 · 0 · 200	Row background
KPIS	Paid (card)	inside band at y ≈ 300	New card visual: Paid Revenue (Products) labelled "Total Revenue", Paid Orders (Products) labelled "Total Orders"
KPIS	Unpaid & Cancelled (card)	inside band	Two values, same layout as Paid; measures not inspected
KPIS	Customer Type (card)	inside band	Same two measures split by type_of_customer: Existing Customer, New Customer
KPIS	KPI (shape)	89 · 1496 · 0 · 300	Band background
(loose)	Matrix	512 · 1500 · 0 · 385	Category · Product Name rows; Revenue (R), Revenue (%), Orders (#), Orders (%). Removed on the new pages

Group (Selection pane)	Item	Original h · w · x · y	Notes
(loose)	Grid 1-4 (shapes)	Grid 1: 200 · 745 · 0 · 390; Grid 3: 294 · 742 · 0 · 600; Grid 4: 296 · 742 · 742 · 600	Panel backgrounds. On the new pages all four are 250 · 745 at (0, 390), (755, 390), (0, 650) and (755, 650)

Other template details:

- **Page-level filters:** Status_Group is (All); invoice_total is greater than 0 (listed twice). The report-level filters are Date (format) and Year.
- **Selection-pane names:** every slicer is called "Date" except Country, a copy-paste leftover. Find them by position, not name.
- **Sync slicers:** for the relative date slicer, the Sync box is unticked on every page, and Visible is ticked only for Daily Overview and the page itself. Changing it on one page therefore doesn't move it elsewhere. Worth confirming that Daily Overview still shows Last 1 Days. The other slicers weren't checked.

Pages built

All three pages are copies of the template. Each keeps the header, all 17 slicers and the KPI band; the old category matrix was removed. The relative date slicer on each new page is set to **Last 90 Days**. It isn't synced with other pages, so they are unaffected. Pages 11-13 are new; the report has 13 pages in total.

Page	Visual (title as shown)	Type	Fields / measures
SALES TRENDS Overview	Is paid revenue growing? Weekly paid revenue incl. VAT (bars) vs paid orders (line)	Line + clustered column	Calendar[WeekDate]; Paid Revenue (Products) bars; Paid Orders (Products) line
SALES TRENDS Overview	Which categories earn the revenue?	Clustered bar, data labels	Category; Paid Revenue (Products)
SALES TRENDS Overview	How is the category mix shifting?	Stacked column	WeekDate; Paid Revenue (Products); legend Category

Page	Visual (title as shown)	Type	Fields / measures
SALES TRENDS Overview	Is invoiced value being collected?	Stacked column	WeekDate; RO Invoice Total; legend invoice_status (Paid cyan, Unpaid amber, Cancelled red — these colours need re-checking after the theme change, see Remaining work)
CUSTOMER INSIGHTS Overview	Is the new-customer share of paid revenue growing? (weekly)	100% stacked column	WeekDate; Paid Revenue (Products); legend type_of_customer
CUSTOMER INSIGHTS Overview	What do new vs existing customers buy?	Clustered bar	Category; Paid Revenue (Products); legend type_of_customer
CUSTOMER INSIGHTS Overview	How established are buyers?	Bar, data labels	customer_tenure_group; Paid Revenue (Products)
CUSTOMER INSIGHTS Overview	Where are buyers?	Bar, data labels	client_state; Paid Revenue (Products)
CUSTOMER INSIGHTS Overview	Which marketing sources bring revenue?	Bar, data labels	heard_about_us; Paid Revenue (Products)
CUSTOMER INSIGHTS Overview	Online or agent?	Bar, data labels	signup_agent; Paid Revenue (Products)
PRODUCT MIX Overview	Where does revenue come from?	Treemap	Category › Sub Category; Paid Revenue (Products)
PRODUCT MIX Overview	Which products earn the most? Top 10	Bar, Top N = 10 visual filter	Product Name; Paid Revenue (Products)
PRODUCT MIX Overview	Monthly or annual?	100% stacked bar	Category; Paid Revenue (Products); legend billing_cycle

Page	Visual (title as shown)	Type	Fields / measures
PRODUCT MIX Overview	How much revenue comes from add-ons?	100% stacked bar	Category; Paid Revenue (Products); legend base_or_addon (add-on cyan, base dark grey, blank light grey)

No measures were added to the semantic model. Every content visual uses existing `revenue_orders_tbl` measures.

Insights the pages surface

These figures were read off the new pages for the last 90 days (5 Jul – 2 Oct 2026). They are a starting point for page titles and commentary, not checked results.

Area	What the page shows	Figure seen
Headline	Paid revenue and orders, 90 days	R518.6K paid, about 2K paid orders
Headline	Unpaid and cancelled, 90 days	R152.8K, 496 orders (about 23% of invoiced value)
Customers	Existing vs new customer revenue	Existing R443.3K (2K orders); New R75.3K (471 orders), so new customers are about 15% of revenue
Categories	Largest categories by paid revenue	Domains about R199K, Infrastructure Hosting about R110K, Unmapped about R77K, Application Hosting about R75K, Security & Backup about R47K, Web Services about R19K, Business Services about R5K
Products	Top products	.co.za Domain about R103K; "Not in Combined Revenue" about R77K; .com Domain about R50K; Dedicated Server about R45K; Positive SSL about R33K
Data gap	Revenue with no product mapping	About R77K (roughly 15%) sits in Unmapped / Not in Combined Revenue

Area	What the page shows	Figure seen
Billing	Billing cycle mix	Infrastructure Hosting is mostly monthly; Domains and Security are annual; Application Hosting is mixed
Add-ons	Add-on share of revenue	Close to zero in every category; most rows are base or blank
Channel	Sign-up channel	Online about R0.36M; Agent about R0.08M; (Blank) about R0.08M
Marketing	How customers heard about 1-grid	"Did not say" is by far the largest answer (about R0.36M), which limits attribution
Location	Province	Gauteng leads (about R0.24M), then Western Cape and Eastern Cape
Tenure	Account age at order	10+ year customers bring the most revenue (about R0.26M)
Trend	Weekly paid revenue	Roughly R30-60K a week; a peak around mid-August
Collections	Weekly invoice status	Unpaid value grows in the most recent weeks, as expected for invoices not yet due

The weekly figures are read from the charts. Rerun them before quoting.

Brand theme

A custom theme named **1-grid Brand** replaced the report's previous custom theme ("theme created by p..."). A theme applies to the whole report, so the original pages change colour too. Use View › Theme › theme format pane › Theme settings › ... › Import / Export to manage it. The previous theme was not exported, so closing without saving is the only way to get it back.

Role	Colour	Source
Primary (data colour 1)	#00C1DE cyan	Booklet p.9, Pantone 311C
Data colour 2 / text	#55565A cool grey	Pantone Cool Grey 11
Data colour 3 / good	#00C18B green	Pantone 3395C
Body text	#231F20 black	Booklet black

Role	Colour	Source
Tints (data colours 4–8)	#7FDFEE, #A7A8AB, #7FE0C5, #007E91, #00845F	Derived tints and shades
Neutral / pending (data colour 11)	#F2A900 amber	Added for unpaid status
Bad (data colour 12)	#E5484D red	Added for cancelled status

- **Fonts:** the booklet's fonts (PF DIN Text Pro, Open Sans) aren't available in Power BI. A theme value of "DIN" rendered as a serif fallback. The theme uses full Segoe UI font stacks instead (e.g. 'Segoe UI Semibold', wf_segoe-ui_semibold, helvetica, arial, sans-serif). A bare font name has no fallback and renders as serif on Macs.
- **Chart styling in the theme:** white background, 1 px #E3E5E8 border, 8 px corner radius, no shadow, axis titles off, dotted light gridlines, legend at the top without a title, 8–9 pt grey labels.
- **Not in the theme:** page background. The plan is to set #F4F6F8 on the new pages only, so the original pages keep a white background.
- The theme JSON is in the session workspace as 1grid_brand_theme.json. Ask for it to be sent as a file if you want to keep it.

Brand guidelines summary

The 16-page 1-grid brand booklet (v2) sets a cyan-and-grey identity with a green accent. Below is what it means for the report.

Topic	Booklet rule	Report implication
Logo	"1" and dash in cyan, "grid" in grey, "GET ONLINE WITH US" tagline. Never stretch, rotate, shadow, re-space or change proportions. Colour logo is not for dark backgrounds; use the all-white version there.	Keep the existing logo image at its aspect ratio (184 : 80). The planned 110 × 48 keeps it. Keep the header white.
Logo variants	On cyan: white "1-" with grey "grid". On light grey: full colour. On black: all white.	If the header ever turns cyan, use the white-and-grey version

Topic	Booklet rule	Report implication
Primary font	PF DIN Text Pro (Thin to Extra Black)	Not available in Power BI. The closest available is Segoe UI Semibold for titles. Text boxes can use "DIN" only if it renders, which it didn't here
Secondary font	Open Sans (Light to ExtraBold)	Not in the Power BI font list; Segoe UI used instead
Office font	Calibri, for office-made items such as PowerPoint and letterheads	Exports to PowerPoint may pick it up
Colour: cyan	Pantone 311C, RGB 0 193 222 (#00C1DE)	Primary series, title accent, "Paid"
Colour: green	Pantone 3395C, RGB 0 193 139 (#00C18B)	Secondary series, "good"
Colour: grey	Pantone Cool Grey 11, RGB 85 86 90 (#55565A)	Text, axes, second series
Colour: black and white	Black, white	Body text, backgrounds
Gradient	Cyan to green	Optional header or accent band; avoid in charts
Grid pattern	Rounded-square tiles in cyan as "a subtle point of interest"	Optional faint decoration in the header; never behind data
Iconography	Line icons in grey with cyan detail (monitor, clock, server, gears, chip, drive, search, map pin)	Optional icons on KPI cards in the same style
Look and feel	Lowercase bold headlines, plenty of white space, lifestyle photos	Short headings, generous padding; no photos in the report

The palette has no amber or red, so the theme adds #F2A900 and #E5484D only for unpaid and cancelled status.

Design system for the pages

Every page should read top-left to bottom-right: filters, then KPIs, then trends, then breakdowns. Every visual answers one stated question. The rules below combine the design instructions, the brand booklet and the two inspiration articles. The articles stress single-screen executive views, KPI cards with comparisons, tidy filter placement, and hover detail instead of extra visuals.

Principles applied, or to apply:

1. **One question per page and per visual.** Titles are written as questions ("Is paid revenue growing?") so they stay true when filters change.
2. **High signal-to-noise:**
 - no axis titles where the legend or title says it;
 - dotted light gridlines;
 - data labels instead of a value axis on bar charts;
 - no shadows or 3-D;
 - no legend title;
 - at most 6–8 visuals per page.
3. **Colour carries meaning:**
 - cyan for the main series;
 - greys for context;
 - green, amber and red only for paid, pending and cancelled.
4. **Consistent grid:**
 - 8 px spacing steps;
 - same card radius (8) and border (#E3E5E8);
 - KPI row in the same place on every page.
5. **Filters out of the way:** a left rail holding all 17 fields, so the content area keeps the full width.
6. **Detail on demand:** tooltip pages instead of extra charts.
7. **Correct numbers first:**
 - one measure family per page (revenue_orders_tbl);
 - "incl. VAT" in the titles;
 - never stack order counts by product.

KPI card spec (new card visual, one card per measure group):

Property	Value
Size	100 px tall; Paid and Unpaid 300 px wide, Customer Type 632 px
Background	White, 8 px radius, 1 px #E3E5E8 border, no shadow
Accent bar	Left side, 4 px: cyan (Paid), amber (Unpaid & Cancelled), green (Customer Type)
Title / category label	Segoe UI Semibold 10 pt, #55565A
Value	Segoe UI Bold 22–24 pt, #231F20; display units: thousands, 1 decimal (R518.6K)
Secondary label	Segoe UI 9 pt, #55565A ("Total revenue", "Total orders")
Optional	Reference label: change vs prior period (needs the new measures), or a small sparkline of weekly revenue

Chart spec (set in the theme unless noted):

Element	Setting
Card	White, 8 px radius, #E3E5E8 border, padding 8 / 12
Title	Segoe UI Semibold 12 pt, #55565A, one line
Axes	Titles off; labels 8 pt grey; value axis hidden when data labels are on (set per visual)
Gridlines	Dotted #EDEEF0
Legend	Top, 8 pt, no title
Series colours	Category charts: cyan, grey, green, then light tints. Status charts: Paid cyan, Unpaid amber, Cancelled red, Refunded light grey (set per visual)
Page background	#F4F6F8 (set per page)

Tooltip page spec (to build):

Tooltip page	Canvas	Content	Use on
TT - Category	Tooltip size (320 × 240), hidden, "Allow use as tooltip" on	Category name; cards for Paid Revenue (Products), Paid Orders (Products), Unpaid Revenue (Products); top 5 products bar	Category bar, treemap, category mix, add-on and billing-cycle charts
TT - Week	Same	WeekDate; paid revenue and orders cards; top 3 categories that week	Weekly revenue combo, invoice-status chart, new-customer share chart
TT - Customer	Same	Segment name; revenue, orders, share of total	Tenure, province, marketing source, sign-up channel bars

Set each target visual to Format › General › Tooltips › Type: Report page, then pick the page. Leave the tooltip page's filters on Auto so it inherits the hovered point.

Filter functionality

All 17 template slicers should now filter every chart and KPI on the new pages, because every visual uses `revenue_orders_tbl` measures. This hasn't been tested by clicking through each slicer yet. In the model, filters flow from `orders_invoices_tbl` to `revenue_orders_tbl`, not the other way. So a product or customer slicer cannot change an `orders_invoices_tbl` measure.

Fix made: the SALES TRENDS combo chart originally used `Paid Invoice Revenue` and `Paid Orders` from `orders_invoices_tbl`. It was switched to `Paid Revenue (Products)` and `Paid Orders (Products)`, so product, category, customer and location slicers now reach it. Per the design instructions, these reconcile to the same total.

Cleanup: a hidden duplicate combo chart sat inside the first Filters group on SALES TRENDS, left over from an earlier step. It was deleted.

Slicer audit (the field each slicer uses; the table is inferred where the Data pane didn't show it):

Slicer header	Field	Table
Date range, relative date (Last N days)	Date (format)	Calendar
Product Category / Sub-category / Product	Category / Sub Category / Product Name	revenue_orders_tbl (likely)
Invoice ID / Order ID	invoice_id and an order or ID field (the audit read was ambiguous)	revenue_orders_tbl or orders_invoices_tbl
Client ID	client_id	Clients
Company / IP Address	companyname / ip	Clients
Payment Method	invoice_paymethod	revenue_orders_tbl or orders_invoices_tbl
Billing Cycle	billing_cycle	revenue_orders_tbl (likely; also exists in Combined Revenue)
Country / Province	client_country / client_state	revenue_orders_tbl
Domain / Service Status	domain / service_status	revenue_orders_tbl (likely)
Discovery Method	heard_about_us	revenue_orders_tbl
Customer Age	customer_tenure_group (account age, not the person's age)	revenue_orders_tbl

Still to verify:

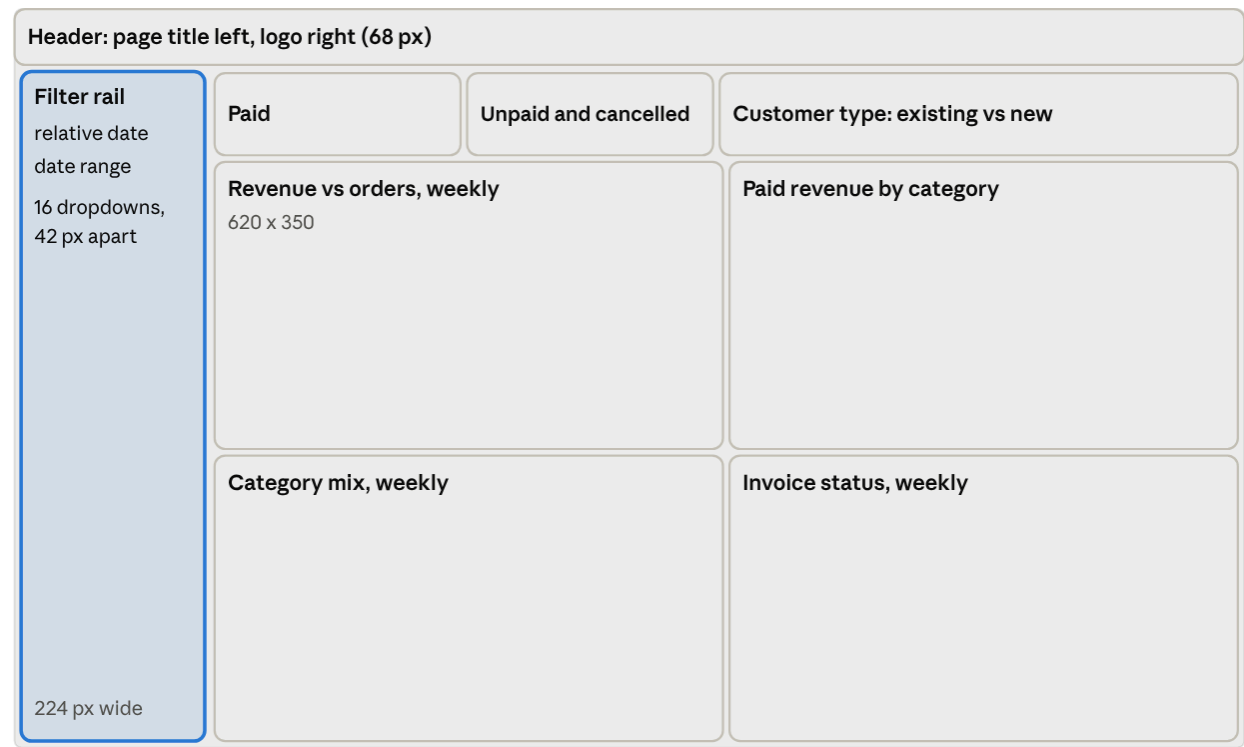

- ☐ Click each slicer on each new page and confirm every chart and card responds.
- ☐ Confirm Billing Cycle and Domain use `revenue_orders_tbl`, not Combined Revenue. Filters don't flow from Combined Revenue into `revenue_orders_tbl`.
- ☐ Check Format › Edit interactions on the copied slicers; none should be set to None.

Redesign in progress (SALES TRENDS)

The new layout moves all 17 slicers out of the two rows across the top and into a left filter rail. That frees the full width for KPI cards and charts. The canvas stays 1500 × 900 px. Positions below are in px as height · width · x · y, the order the Format › General › Properties

boxes use.

Filters move to a left rail so the content gets the full width

To scale: 1500 x 900 px canvas, page background #F4F6F8. Charts shown are SALES TRENDS; the other pages swap in their own.

target layout · 1500 × 900 canvas, to scale

Current state (interrupted): eight slicers were resized but not yet moved: relative date, date range, Product Category, Sub-category, Product, Billing Cycle, Payment Method and Service Status. Payment Method's width stopped at 155, because Power BI caps width at 1500 – x until the slicer is moved left. Nothing else on the page has moved.

Element	Target h · w · x · y
Header shape	68 · 1500 · 0 · 0
Title text box	54 · 900 · 16 · 7
Logo	48 · 110 · 1376 · 10
Filter rail panel (the "Filter" shape in the first Filters group)	816 · 224 · 8 · 76
Relative date slicer	60 · 208 · 16 · 84
Date range slicer	62 · 208 · 16 · 146

Element	Target h · w · x · y
16 dropdown slicers, top to bottom: Product Category, Sub-category, Product, Billing Cycle, Payment Method, Service Status, Domain, Customer Age, Discovery Method, Country, Province, Company, Client ID, Order ID, Invoice ID, IP Address	40 · 208 · 16 · 214, then +42 each (last at y 844)
KPI card: Paid	100 · 300 · 244 · 78
KPI card: Unpaid & Cancelled	100 · 300 · 552 · 78
KPI card: Customer Type (Existing / New)	100 · 632 · 860 · 78
Chart: top-left (revenue vs orders)	350 · 620 · 244 · 186
Chart: top-right (categories)	350 · 620 · 872 · 186
Chart: bottom-left (category mix)	348 · 620 · 244 · 544
Chart: bottom-right (invoice status)	348 · 620 · 872 · 544

To delete once the new layout is in place: Grid 1–4 shapes, the "KPI" shape in the second Filters group, and the "KPI" band shape in the KPIS group. Charts now draw their own white rounded card from the theme.

To undo instead: set the eight resized slicers back to height 90 and widths 260 / 180 / 150 / 150 / 150 / 175 / 150 / 164. Or discard all unsaved changes.

Remaining work

In order. Steps 1–4 finish SALES TRENDS; step 5 copies the result to the other pages.

- ☐ 1. Finish the filter rail and content layout on SALES TRENDS using the positions above. Set the page background to #F4F6F8 (Format page › Canvas background).
- ☐ 2. Restyle the KPI cards: separate white rounded cards, values 22–24 pt, grey labels. Add an accent bar per card: cyan for Paid, amber for Unpaid & Cancelled, green for Customer Type. Rename the "Unpaid & Cancelled" card's labels so unpaid and cancelled aren't read as one figure, or split them per the design instructions.
- ☐ 3. Re-check series colours after the theme change. The invoice-status chart's Cancelled series was set to the old theme colour 3, which is now green; set it to red (#E5484D) and Unpaid to amber (#F2A900) using More colours › hex. Check the add-on and billing-cycle charts the same way.
- ☐ 4. Add custom tooltip pages, both hidden with page size set to Tooltip:

- **TT - Category:** Paid revenue, paid orders and unpaid value cards, plus a top 5 products bar.
- **TT - Week:** revenue and orders for the week, plus the top category that week.
- Point the charts' tooltip setting to these pages (Format › General › Tooltips › Type: Report page). The hidden "Revenue Tooltip" page may be reusable — check it first.
- ☐ 5. Copy the finished header, filter rail and KPI groups to CUSTOMER INSIGHTS, PRODUCT MIX and the template page. On each page, delete the old groups first. Choose "Don't sync" if Power BI asks to sync slicers. Then reposition each page's own charts into the content area.
- ☐ 6. Cut visual noise on every chart:
 - Bar charts with data labels: hide the value axis.
 - Shorten titles to one line.
 - Remove repeated legend titles.
 - Sort the account-age bar by `customer_tenure_sort` instead of by revenue.
- ☐ 7. Optional: rename the 17 slicers in the Selection pane (they're all called "Date") so they're easier to find.

How-to (Power BI service, Edit mode)

Panes used:

- **Visualizations:** three tabs — Build, Format and Theme.
- **Selection:** View › Selection pane.
- **Filters:** the collapsible pane to the left of Visualizations.
- **Sync slicers:** View › Sync slicers pane.

Move or resize anything exactly

1. Select it in the Selection pane. Groups expand with the arrow, and child items select individually.
2. Open Format, then General › Properties. Type Height and Width first and press Enter.
3. Click empty canvas, reselect the item, then type Horizontal and Vertical. Power BI checks position against the size the item had when selected.

Restyle a slicer for the rail

1. Format › Visual › Slicer settings › Style: Dropdown. The two date slicers keep their own styles.
2. Slicer header: Segoe UI 8 pt, #55565A.
3. Values: 8 pt.

4. General › Effects: background off, visual border off. The rail panel supplies the white card.

Page background

Click empty canvas › Format page › Canvas background › colour #F4F6F8, transparency 0%.

KPI card restyle (new card visual)

1. Select the card. In Format › Visual › Cards, set background white, border #E3E5E8 at 1 px, rounded corners 8 and accent bar on (left, 4 px, brand colour).
2. Callout values: Segoe UI Bold 22 pt. Labels: Segoe UI 9 pt grey.
3. General › Effects › Shadow off.

Series colour by hex

Format › Visual › Columns (or Bars) › Apply settings to › Series › pick the series › Colour › More colours › type the hex.

Tooltip page

1. Add a new page, then Format page › Page information › turn on "Allow use as tooltip".
2. Canvas settings › Type: Tooltip. Hide the page (right-click the tab › Hide).
3. Add cards and a small bar using revenue_orders_tbl measures.
4. On each target chart: Format › General › Tooltips › Type: Report page › Page: pick it.

Copy the redesigned frame to another page

1. In the Selection pane, Ctrl-click the Header Bar, both Filters groups and KPIS, then Ctrl+C.
2. On the target page, delete its old versions of those groups and Ctrl+V. Pasted items keep their positions.
3. Answer "Don't sync" if asked about slicers. Re-set the relative date slicer to the page's own default.

Top N filter

Select the chart › Filters pane › the field's card › Filter type: Top N › Top 10 › By value: drag the measure in › Apply filter.

Theme

- Re-import: Theme tab › Theme settings › ... next to the theme name › Import › choose `1grid_brand_theme.json`.
- Export: the same menu › Export. Export the current theme before any re-import.

Save or discard

- Save: File › Save.
- Discard: close the report and choose not to save, or reload the page and leave without saving.

Verification checklist before saving

Tick these off in the report before File › Save.

Numbers

- ☐ Set the date range to 1-29 Sep 2026 on SALES TRENDS (relative slicer cleared). Paid card = R143,924.45 and 588 orders.
- ☐ The category bars sum to the Paid card (currently about R532K vs R518.6K over 90 days; investigate the gap).
- ☐ Unpaid & Cancelled card shows the intended measures. Check the field wells; the card wasn't inspected.
- ☐ Top 10 products filter still applies after any edit to that chart.

Filters

- ☐ On each new page, pick one value in every slicer in turn. Every chart and KPI card changes, and nothing goes blank unexpectedly.
- ☐ Clear all slicers afterwards. The page should open on Last 90 Days with everything else at All.
- ☐ Daily Overview still shows Last 1 Days.

Design

- ☐ No leftover Grid or KPI background shapes behind charts; nothing overlaps.
- ☐ Every chart title fits on one line at Fit to page.
- ☐ Status colours: Paid cyan, Unpaid amber, Cancelled red, Refunded grey.
- ☐ Category colours match across SALES TRENDS, CUSTOMER INSIGHTS and PRODUCT MIX.
- ☐ Check text in the browser that report readers use. Fonts should be Segoe UI or the fallback sans-serif, never serif.
- ☐ Tooltip pages appear when hovering the target charts and show the hovered category or week.

Original pages

- ☐ PRODUCT SALES | Overview, Daily Overview and Guide still look right after the theme change, with no unreadable text colours.

Housekeeping

- ☐ Pages 7–9 (Template, Duplicate of Template, Page 1): hide or delete.
- ☐ The Filters pane is collapsed. Toggling it in Edit mode also changes what readers see.
- ☐ Mobile layout: either lay out the new pages there or accept the default.

Open issues and decisions

One mismatch is unexplained; three items need a decision from you.

- **Mismatch to investigate:** on SALES TRENDS (last 90 days), the category bars add up to about R532K, but the Paid card shows R518.6K. That gap is too big to be rounding. Possible causes: an order split across categories, or the "Unmapped" category overlapping "Not in Combined Revenue".
- **Reconciliation not run:** the instructions' check for 1–29 Sep 2026 (588 paid orders, R143,924.45) hasn't been done on the new pages.
- **Decision — new measures:** Average Order Value, Collection Rate, New Customer Share and the prior-period comparisons need new measures in the shared semantic model, which every report using it would see. Nothing was added.
- **Decision — canvas size:** the pages keep the template's 1500 × 900, not the 1280 × 720 in the design instructions.
- **Decision — theme scope:** the brand theme changes the original pages' colours too. Keep it report-wide, or limit it to the new pages by setting their colours explicitly.
- **Data gaps (not fixable on the report):** the old report's Actual v Budget view needs a budget table this model doesn't have. Domain extension and register vs transfer fields exist only in Combined Revenue.

Design-instructions compliance

The uploaded instructions (powerbi_report_design_instructions.md) define 7 pages, 10 numeric rules and a design standard. Where the new pages stand against them:

Instruction	Status	Note
Workflow 1 – inspect the model (DAX query view, INFO.VIEW)	Partly	Tables and fields were inventoried from the Data pane; DAX query view wasn't used, and relationships weren't opened
Workflow 2 – validate baselines (588 / R143,924.45)	Not done	On the checklist

Instruction	Status	Note
Workflow 3 – audit current pages	Partly	Template, PRODUCT SALES, Daily Overview and Guide reviewed; pages 4–9 not opened
Workflow 5 – create measures in a _Measures table	Not done	Needs your approval (shared model)
Workflow 6 – apply a theme JSON first	Done	1-grid Brand theme
Rule 1 – never SUM invoice_total on revenue_orders_tbl	Followed	
Rule 2 – headline and trends from orders_invoices_tbl	Deliberately not followed on the trend chart	Switched to revenue_orders_tbl so every slicer works; per the instructions both reconcile to the same total
Rule 3 – paid orders exclude R0	Followed	Existing measures plus page filter invoice_total > 0
Rule 4 – total_rev is not revenue	Followed	Not used
Rule 5 – state VAT basis	Followed	"incl. VAT" in titles
Rule 6 – don't stack order counts by product	Followed	Stacked charts use revenue only
Rule 7 – dates start Jul 2025	Followed	90-day default; no year-on-year
Rule 8 – blank invoice status excluded from unpaid	Not checked	Invoice-status chart shows statuses as they come
Rule 9 – Calendar for every date axis	Followed	WeekDate from Calendar
Rule 10 – ID fields not as dropdowns on summary pages	Not followed	Instruction to keep every filter field takes priority; IDs sit at the bottom of the rail

Instruction	Status	Note
Pages: Overview, Product Performance, Customers	Mapped	Sales Trends ≈ Overview trend; Product Mix ≈ Product Performance; Customer Insights ≈ Customers + part of Channels
Pages: Collections, Channels, Order Detail, Data Quality	Not built	Not requested in this round
Canvas 1280 × 720	Not followed	Kept the template's 1500 × 900
6–8 visuals per page	Followed	4–6 charts plus KPI cards
KPI cards with delta and sparkline	Not yet	Needs prior-period measures
Split Unpaid (collectable) from Cancelled (lost)	Not yet	Template card kept as is
Titles state the question or insight	Followed	Question form
Colour: brand cyan primary, semantic colours only for meaning	Mostly	Status colours to re-check after the theme change
Tooltip pages	Not yet	Spec above
Collapsible filter panel (bookmarks)	Alternative	Left rail instead of a bookmark toggle
Sync the Date slicer across pages	Not done	Each new page keeps its own relative date slicer

Old Daily sales (beta) report review

The older report (Data analytics workspace, "Daily sales (beta)", data updated 02/10/26) has 8 pages. It was viewed only, not changed.

Page	What it shows	Value for v2.0	Used?
Daily	"New sales analysis": MTD and yesterday % new-customer revenue (25.1%, 31.2%); month buttons Nov-25 to Oct-26; links to Sales snapshot, Daily sales, Tabular analysis, Actual v Budget, Site traffic; decomposition tree (month › product type); daily table with variance %	% new-customer revenue KPI; decomposition tree for exploration; day-on-day variance	New-customer share became a CUSTOMER INSIGHTS chart. Decomposition tree and variance not yet
Midday view	Latest order time stamp (02 Oct 2026 15:24); today's % new-customer revenue; daily actual vs budget with variance	Data-freshness stamp; budget comparison	Not yet; no budget table in v2.0
Domains	Yesterday's domains: TLD mix (co.za 74%), register vs transfer by status, payment method mix	Domain detail by TLD and register/transfer	Not used: fields are only in Combined Revenue
Web builder / Web design / Email hosting	Per-product daily and monthly revenue by invoice status (Paid, Unpaid, Cancelled, Refunded) with order-count line	Status-stacked revenue over time	Became the "Is invoiced value being collected?" chart
Daily by Product / Midday Daily by Product	Yesterday's revenue split by product type (donut) and decomposition tree	Product mix	Became the treemap and top 10 on PRODUCT MIX

Ideas still worth adding:

- a "latest order" freshness card in the header;

- a decomposition tree page for ad-hoc exploration;
- a day-on-day variance table on a detail page;
- an Actual v Budget page if the budget table moves into v2.0.

Change log (this session, 2 Oct 2026)

Every change made to the report, newest first. All are unsaved.

#	Change	Where
18	Layout script stopped mid-run; 8 slicers resized (height 40/60/62, width 208, Payment Method 155), not moved	SALES TRENDS
17	Trend combo switched from Paid Invoice Revenue / Paid Orders (orders_invoices_tbl) to Paid Revenue (Products) / Paid Orders (Products)	SALES TRENDS
16	Hidden duplicate combo chart deleted from the first Filters group	SALES TRENDS
15	Theme "1-grid Brand" imported (third version: full Segoe UI font stacks, reordered palette)	Whole report
14	Series colours on add-on chart (add-on cyan, base dark grey, blank light grey, Free orange) and billing-cycle chart (blank light grey, Annually dark grey, Monthly cyan)	PRODUCT MIX
13	Top N = 10 by Paid Revenue (Products) on the products chart; title updated	PRODUCT MIX
12	Filters pane expanded and collapsed again (toggle also affects readers)	PRODUCT MIX
11	Page 13 created from the template: header "PRODUCT MIX", relative date 90 days, matrix removed, grids 2×2, 4 charts	PRODUCT MIX
10	Page 12 created from the template: header "CUSTOMER INSIGHTS", relative date 90 days, matrix removed, grids 2×2, 6 charts	CUSTOMER INSIGHTS
9	A "Delete this page" prompt opened by accident (Delete key with tab focus) and was cancelled; no page lost	CUSTOMER INSIGHTS

#	Change	Where
8	One chart title briefly set to 60 pt by a script, reset to 14 pt	CUSTOMER INSIGHTS
7	Invoice-status series colours set (Paid theme colour 1, Cancelled old theme colour 3)	SALES TRENDS
6	Page renamed "SALES TRENDS Overview"; header text changed	SALES TRENDS
5	4 charts added; axis titles off; data labels on the category bar	SALES TRENDS
4	Relative date slicer changed from Last 1 to Last 90 Days	SALES TRENDS
3	Grid 1-4 resized to 250 × 745 in a 2×2	SALES TRENDS
2	Page 11 created from the template; matrix deleted	SALES TRENDS
1	A matrix row was clicked by mistake (cross-filter) and cleared again	Template page

The semantic model, other pages' visuals, relationships and measures were not changed.

Automation notes

All edits were made in the Power BI service editor in Chrome, using in-page JavaScript helpers. These notes are for whoever continues the build, by hand or with Claude.

- **Helpers are patched off right now:** to stop the layout run, `window.pbiPos` and `window.selSpec` in the open tab were replaced with no-ops. Restore them with `window.pbiPos = window.__pbiPosOrig; window.selSpec = window.selSpecOrig`. A page reload clears all helpers.
- **Adding fields:** wells accept a simulated HTML5 drag (`DragEvent` with a `DataTransfer`) from the Data pane tree item onto the well's "Add data fields here" box. Clicking a well does not open a field picker.
- **Size and position:** set the input values, then dispatch input, change and Enter events. The x / y limits are checked against the size the visual had when it was selected. So shrink first, deselect, reselect, then move. Width is capped at 1500 – x, so move a visual left before widening it.
- **Title font-size trap:** if the Title section is expanded above Properties, the first "size" input is the title font size. One title was briefly set to 60 pt this way.

- **Theme import:** Theme settings › ... › Import opens a native file dialog. It was worked around by intercepting `HTMLInputElement.click` so the file input stays in the page, then uploading the JSON to it. Validation errors show in a dialog. One example: legend position must be "Top", not "TopLeft".
- **Page delete trap:** pressing Delete while the page tab has focus offers to delete the whole page. Always click the item in the Selection pane first.
- **New visuals:** clicking a visual type while another visual is selected converts that visual. Deselect first.
- **Long scripts:** the browser tool times out on long scripts. Run them in the background and poll a log (`window.__log`).
